WHITE PAPER

Release Version 11.0

March 2022

Legal Investment Disclaimer

This material does not constitute any representation as to the suitability or appropriateness of any security, financial product or instrument. There is no guarantee that investment in equity of **TRUEVALUE HOLDINGS, INC.** will be profitable or will not incur loss. This information does not have regard to the specific investment objectives, financial situation, and the particular needs of any specific person who may view its investor materials. Investors should seek financial advice regarding the appropriateness of investing in any security or investment strategy discussed in the TGCC investor materials and should understand that statements regarding future prospects may not be realized. Investors should note that security values may fluctuate and that each security's price or value may rise or fall. Accordingly, investors may receive back less than originally invested. Past performance is not a guide to future performance. Investing in any security involves certain risks called non-diversifiable risk. These risks include market risk, interest-rate risk, inflation risk, and event risk. These risks are in addition to any specific, or diversifiable, risks associated with particular investment styles or strategies. **The TGC ICO token (TGC) should not be bought for investment purposes or considered as an investment vehicle**, as the TGCC ICO is not an "investment round" but is solely intended to raise funds by issuing a pre-sale of tokens, which perform a key function within the TGCC wallet, to convert to other cryptocurrency.

Forward-Looking Statements

Forward-looking statements relate to expectations or forecasts of future events. You can identify these statements by the fact that they do not relate strictly to historical or current facts. They use words such as "anticipate," "estimate," "expect," "project," "intend," "plan," "believe," and other words and terms of similar meaning in connection with a discussion of potential future events, circumstances or future operating or financial performance. In particular, these include statements relating to future actions, prospective products or product approvals, future performance or results of current and anticipated products, sales efforts, expenses, the outcome of contingencies such as legal proceedings, and financial results.

Any or all of our forward-looking statements here or in other publications may turn out to be wrong. They can be affected by inaccurate assumptions or by known or unknown risks and uncertainties. Many such factors will be important in determining our actual future results. Consequently, no forward-looking statement can be guaranteed, and they may be adversely affected by factors, including general market conditions, competitive product development, product availability, current and future branded and generic competition, federal and state regulations and legislation, service availability issues, timing of trades, patent positions, litigations and investigations. Our actual results may vary materially, and there are no guarantees about the performance of equity in TGCC. We undertake no obligation to correct or update any forward-looking statements, whether as a result of new information, future events or otherwise.

HISTORY OF CURRENCY

Conceptually, the very first acts of bartering of goods and services amongst humans are the origin of currency. People found out that there were some problems with the bartering system when they did not like what the other party was offering in exchange. To solve this problem, commodity based money was invented utilizing pretty basic items that everyone could use daily.

Due to problems of the commodity based money, and sometimes due to its perishable condition, it was necessary to find an alternative, and at about 5000 BC some stones and metal objects started to be used as money.

4000 years later, at about 1000 BC, those metal objects have become a lot more sophisticated and refined. In China, they were using cast bronze already.

Some sort of metal coins were made at about 700 – 500 BC in China, India and Lydia, which is the current Turkey. This system was rapidly being adopted, since everyone could relate the intrinsic value of the coins.

At 500 BC many other Western empires, like the Greek, the Persian, Macedonian and Roman, were already minting their own versions and series of coins with specific values. This was crucial in the process of money adoption, because now, with real values minted on the coins,

people already knew what to pay for a certain product or service. Since coins were based on rare metals, merchants were able to set their prices accordingly. This is the very reason by which many of the currencies worldwide are derivatives of the universally recognized standard of silver and gold.

In 118 BC the in a form of leather, a bank note was issued in China. It was about a 1 foot by 1 foot piece of deerskin, with vivid colors on the edge, and it was used to exchange for goods. More likely, this is the very first kind of “paper money”, even though it was a piece of leather.

By the 7th century, there was officially established the paper currency, and coins were minted with non-precious metals. This meant that money did not have to be valuable by itself, it was backed by a government or a bank as a promise to exchange it for certain amount of gold or silver. As an example, the old British Pound bill of Pound Sterling, was once backed and guaranteed to be redeemable by one pound of sterling silver.

By the year 960, China started using paper money.

In the 1400s, the Medici family opened several banks at foreign locations to help textile merchants and gather their deposits. They started to keep records in Italian and foreign currencies, and they were holding accounts with foreign banks as well.

By 1816 England made gold a benchmark of currency value, meaning that the value of currency was fully backed by a certain number of ounces of gold (gold standard). This measure will prevent inflation of currency and was implemented for most of the 19th and 20th centuries by the majority of currencies throughout the world.

On March 10th, 1862 the first US paper money was issued.

Denominations were \$5, \$10 and \$20. They became legal tender on March 17th, 1862. A few years later, in 1900, the U.S.A. went on the Gold Standard.

Between 1921 and 1924, the worst hyperinflation occurred in Germany as a result of suspending the convertibility of German marks to gold since Germany had to pay the massive costs and debt of the First World War. Germany had to borrow an immense amount of money, and this caused a tremendous devaluation of the mark vs. the US dollar. The devaluation then was accelerated following the Treaty of Versailles and the London Ultimatum, which basically demanded Germany to pay massive reparations in gold or foreign currency. To acquire foreign currency, Germany began printing enormous amounts of paper money. Just as a reference, in December of 1923, a single US Dollar was worth 4,210,500,000,000 German marks.

In 1930, after the Wall St. Crash, and the great depression, marked the beginning of the end of the gold standard in the US. The gold standard was revised, and the price of gold was devaluated. British and

international gold standards ended soon thereafter, and this was the beginning of the complexities of international monetary regulations.

After WWII, the Bretton Woods Accord was signed to value a troy ounce of gold at \$35 and peg all other currencies to this, allowing them to fluctuate within a range of 1% to the currencies par. This was a measure against hyperinflation.

In 1950 Diners Club issued the first credit card in the US. And in 1958 American Express also launched its first credit card.

In 1971, under the presidency of Richard Nixon, the Bretton Woods Accord was terminated, and this was the beginning of a free-floating currency system.

TODAYS STATUS OF THE FIAT CURRENCY

All world currencies are under the permanent political stress. Central Banks are managed with a great dose of political influx, instead of being pure technical and analytical. Governments have systematically used the currency policy to manage political situations, for instance, in the US, back in 1971 where President Nixon was in office, the supply of gold was shortening and it had been illegal since the 30s to use as a tender currency, therefore, President Nixon's government finished all and any relationship of the issuance of new US Dollars, to the reserve in gold kept at the Federal Reserve. This has caused in the US, taking in account how solid and large the economy of the Country is, that it has faced a 595% devaluation from 1971 to 2022. Issuing new money in the past, meant having enough reserves of gold or silver, now, it is just based on "confidence" in the economy.

The Webster's Dictionary defines Fiat Money as:

What It Is

Fiat money refers to any currency lacking intrinsic value that is declared legal tender by a government.

How It Works

As valid currency solely by virtue of a government declaration, fiat money is not backed by any commodity, such as gold, but only by the

faith of the bearer. In this respect, unlike currencies backed by gold or silver, fiat money does not have any intrinsic value (e.g., paper money and much coinage). The U.S. dollar is an example of fiat money.

Why It Matters

Fiat money allows the declaring government to employ virtually any material, such as paper (which is lightweight and convenient for carrying), as a medium of exchange. However, since the value of fiat money lies solely in the faith of those using it, its value can be easily diminished and result in rapid inflation.”

LOOKING AT THE FUTURE- **www.truegoldcoin.com**

TrueGoldCoin has been thought in a way that serves the marketplace without risks of losing value, without the influence of the political temperature or the empty political campaign offers, it is conceptually just the best of the past, with the most innovative technology of the future. No tradeoffs and no issuance of coins without backing.

TrueGoldCoin has secured a gold concession title issued by the government of Colombia. The company that owns TrueGoldCoin was originally based on the Nevis Islands, and then all rights were assigned to Truevalue Holdings, Inc. (TVH) a Corporation in Wyoming, USA., and is the issuer of TrueGoldCoin tokens running on the Ethereum Blockchain.

When launched, at the end of 2017, TGC opted to travel at a conservative pace in regards to participating in many exchanges and marketplaces. We tried to avoid the hype and craziness of the early adopters of crypto currencies. Later, we updated the smart contract to become stronger and more efficient in 2020.

The token was already backed with gold reserves, the gold in the international market gains value at a steady pace and TGC can be seen as an investment buffer to exit from excess volatility, while participating in the capital gains of marketplaces.

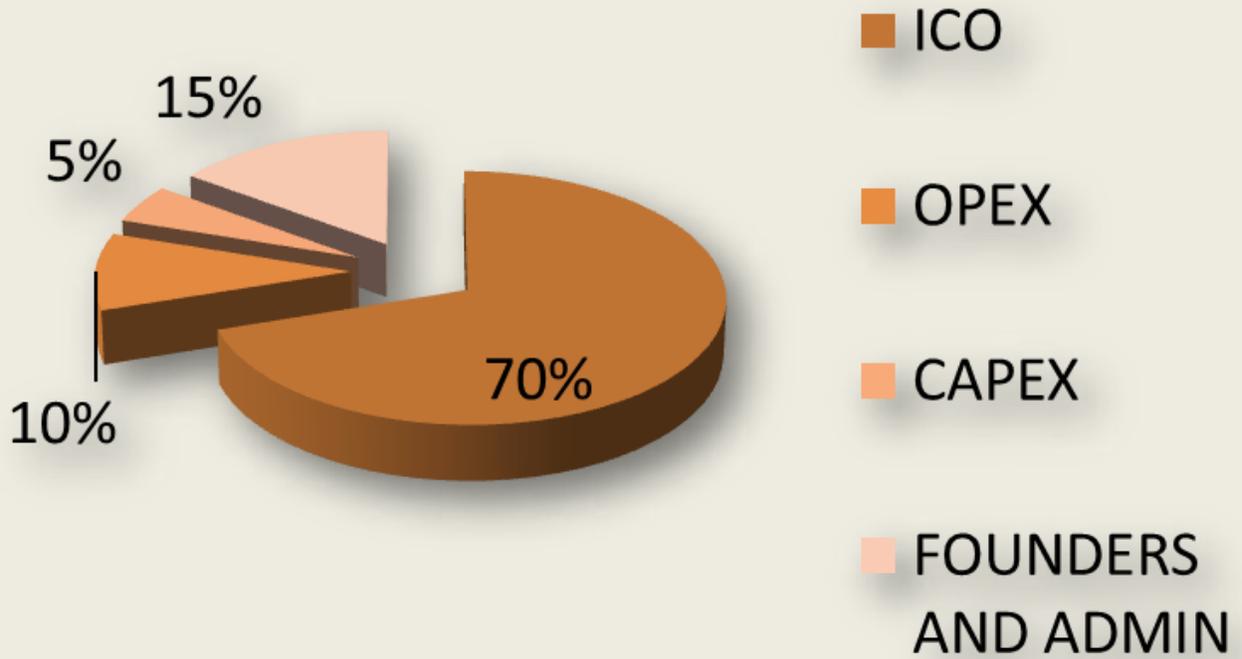

PROBLEM SOLVING

- We issued 5 billion tokens at ICO at an initial value of 1 ETHER = 100 TGC (TrueGoldCoins).
- After a period of time, the value of TGC was calculated based on an algorithm that takes in account the international gold value, the Dow Jones Index and the Ethereum value.
- Founders and administration will keep 15% of initial tokens.

Token Distribution (MM)

OUR TECHNOLOGICAL APPROACH

This chapter will name and describe all aspects of our project. From the very conceptual legal structure, to the descriptive technological tools that will be used. No project is perfect, and all execution needs fine tuning, but we do not take shortcuts in technology and protection of assets. TrueGoldCoin belongs to all holders of it, and we are just the custodians of the core value of their assets.

We base all of our operation and legal entities on the Nevis Islands. Nevis companies do not add extra layers of taxation to the taxes investors and token holders already pay in their home country, which creates a level playing field for investors from all jurisdictions. The State of Wyoming also has tremendous tax benefits, while still being a beneficiary of the US legal system.

The name, logos, brands, trademarks and websites belong to the Wyoming company and are registered in the USA.

We operate under an Ethereum Account Address and use regular banking system in US dollars. The Smart Contract Token is also operating on Ethereum and already generated more than 5B supply of tokens.

From time to time, distributors will ask the TrueGoldCoin Treasury to transfer back and forth TGC Tokens to/from their wallets as a regular ledger transfer of treasury. TGC Distributors can exchange or sell the

TGC Tokens under their control, and will be done to token buyers at private, ICO or marketplace.

The TrueGoldCoin Tokens can be exchanged for other cryptocurrencies, FIAT currencies, services and goods.

TrueGoldCoinToken Distribution

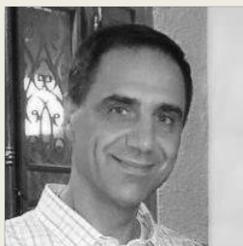

- Channels to be considered:
 - Wholesale
 - ICO
 - Retail by Payment Platforms
 - Own Multicurrency Wallet
 - Own Multicurrency Exchange
 - Third party Wallets and Exchanges
 - Deals with Marketplaces, eBay, Amazon, etc.
 - Cryptocurrency Bank
 - We expect several rounds of Supply Generation and Offerings in different modes, FFN and ICO, perhaps with different parameters (value, % to Trusts, etc.).

Primary distribution channels banned to US, Hong Kong and Singapore citizens.
